**Advanced Power Components** has signed a distribution agreement with AVX, specifically covering the US manufacturer's high reliability capacitors including tantalums and ceramic capacitors.

"AVX and its products are synonymous with customers in the high reliability market," commented Amanda Parker, APC's sales and marketing director.

AVX supplies parts for the military, aerospace, space and medical markets qualified to AS9100, IECQ-CECC, TS16949-2002 and ISO9001-2000 standards.

The company also has a number of products qualified to COTS+, ESCC, SRC, MIL and DSCC drawings, as well as optional custom screening and test service capabilities.

Lee Thompson, AVX's European director for Hi-Rel products, called it a "valuable addition to our distribution network."

The products will be distributed through the [APC Hi-Rel unit](#).
